Also described are the heat treatment procedure, the mechanical properties of T-60 between 50 and 200C, and its physical properties. The thermal conductivity was measured by a comparison method. Young's modulus was measured by a dynamical method in the 20--600C range. A fatigue test was carried out on a Schenck-type setup. Corrosion resistance was tested by a method developed at the Vyzkumny Ustav CKD Blansko and is compared with that of other materials. The technology of producing large blades and the results of a detailed study of the mechanical properties of four blades are described. Orig. art. has: 13 figures and 6 tables.

Calculation of the investment and operating costs of a contact precipitation in con-
nection with following decontamination by ion exchange

SOURCE: Kernenergie, v. 8, no. 12, 1965, 697-704

TOPIC TAGS: chemical decontamination, radioactive waste disposal, water purification,
chemical precipitation, ion exchange, cost estimate, industrial plant

ABSTRACT: A calculation of the cost of construction and operation of a plant with a capacity of $10 \text{ m}^3/\text{h}$ has been carried out on the base of semitechnical experiments of decontaminating radioactive waste waters by contact precipitation and ion exchange. The investment cost of a plant of the capacity mentioned above for the two variants in account amounts to about 290,000 and 320,000 M, respectively. The operating cost of contact precipitation amounts to $0.99 \text{ M}/\text{m}^3$ for the one-stage plant, and to $0.94 \text{ M}/\text{m}^3$ for the two-stage one. Two variants have been taken into account for decontaminating the radioactive waste waters by ion exchange: using the ionite in the Na-Cl form leads to a total operating cost of $2.45 \text{ M}/\text{m}^3$, using it in the H-OH form to that of $2.86 \text{ M}/\text{m}^3$. The authors thank Prof. Dr. K. Schwabe for his interest in the completion of this work. Orig. art. has: 2 figures and 8 tables. ^{NA}

TITLE: An EPR study of the behavior of hydrogen atoms, oxygen atoms, and reaction products in a rarefied hydrogen sulfide flame

SOURCE: Armyanskiy khimicheskiy zhurnal, v. 19, no. 2, 1966, 135-139

TOPIC TAGS: free radical, flame study, combustion

ABSTRACT: The oxidation of hydrogen sulfide is governed by a branched chain mechanism. Rarefied hydrogen sulfide flames were subjected to EPR measurements. The

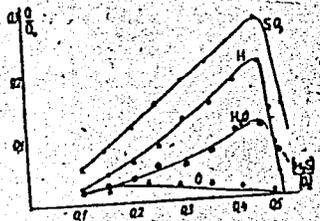

Fig. 1. Dependence of the concentration of SO₂, H₂O, H and O on the composition of the reaction mixture at an initial pressure of 5 mm. The ordinate represents the ratio of the amount of the product obtained Q to the amount of starting reaction mixture Q₀. The maximum concentration of hydrogen atoms was ~10¹⁵ particles/cm³, that of oxygen atoms ~10¹⁴ particles/cm³.

effect of the composition of the reaction mixture on the changes in concentration of hydrogen atoms and oxygen atoms and on the reaction products ($SO_2 + H_2O$) was demonstrated. It was shown that new products appear in the absence of complete combustion. The effect of additions of n-butane on the lower ignition limit of hydrogen sulfide was examined. TITLE: The effect of technology on the electrical characteristics of a halogen current counter

SOURCE: Przegląd elektroniki, no. 2, 1964, 83-86

TOPIC TAGS: current counter, gas filled counter tube, Geiger counter, Geiger-Mueller counter tube, radiation counter, halogen quenched counter, halogen current counter, halogen counter tube

ABSTRACT: In this article there is a discussion of the effect of chemical sorption and adsorption of bromine on the temperature stability and endurance of halogen current counters. Results are given of tests with a current counter which has a stannic oxide cathode. The examples which are discussed illustrate the effect of manufacturing technology on the work of the counter. Lactose dibenzyl mercaptal and some derivatives of lactose. J. Staněk and J. Sada (Charles Univ., Prague). *Collection Czechoslov. Chem. Commun.* 14, 540-50(1949)

(in English); cf. C. A. 24, 1625. Lactose (I) with Ph-C₆H₅SH (II) in concd. HCl gives the expected 1 dibenzyl mercaptal (III); no hydrolysis of I was observed. Concd. HCl (180 ml.), 108 g. I, and 74.4 g. II were shaken until soln. was complete and the soln. dild. after 2 hrs. with 3 l. H₂O; the voluminous ppt. of III, recovered in 150 g. H₂O, yield by decantation of the HCl, filtration, washing with H₂O and EtOH, and crystn. from EtOH, m. 128°, [α]_D²⁰ = 38.21° (c = 0.17%, EtOH); 5.7 g. hydrolyzed with 50 ml. 2% H₂SO₄ on a steam bath for 4 hrs. gave *l*-lactose dibenzyl mercaptal, m. 136° (from EtOH), [α]_D²⁰ = 38.81° (c = 0.17%, EtOH). The following derivs. of III were prepd. (% yield, m.p., and [α]_D²⁰ detd. in EtOH soln. of the concn. indicated): *o*-*iso*-Me (40, 40°, 50.08°, 0.14%), by adding 10.5 g. MeI slowly to 5.7 g. III and 2.5 g. Na in 100 ml. liquid NH₃, evapg. the NH₃, extg. with hot CHCl₃, drying, evapg., and crystg. the sirupy residue from EtOH; *o*-*iso*-ethyl (IV) (no yield given, 145°

√ 20.15°, 0.15%), by acetylating 5.72 g. III at 0° with 40 ml. anhyd. C₆H₅N and 25 ml. Ac₂O, pouring onto ice, crystg. by rubbing the oil with EtOH, and recrystg. from EtOH; *benzylidene* (70, 101°, 48.38°, 0.31%), by shaking 5.7 g. III, 20 g. BzH, and 4 g. anhyd. ZnCl₂ 24 hrs., dble with 100 ml. H₂O, cooling in an ice bath 12 hrs., siphoning off the aq. layer, dissolving the residue in EtOH, evapg. the EtOH in vacuo, repeating several times, and finally crystg. from EtOH contg. a little NH₃; *acetone* (V) (no constn.), by shaking 5.7 g. III suspended in 100 ml. of an anhyd. 3% soln. of HCl in Me₂CO for 2 hrs., neutralizing with K₂CO₃, filtering, evapg. extg. the residue with EtOH, and evapg. the ext.; V remained as a yellow oil which crystal. on standing 4 months; its EtOH soln. was strongly *l*-rotatory. III (5.7 g.) in 60 ml. H₂O, the mixt. kept neutral by steady addn. of dil. NaOH, a drop of NH₄OH added, the soln. filtered after 2 hrs., and the filtrate evapd. to dryness under reduced pressure; the residue, crystal. from EtOAc ("acetic ester"), gave 1.1 g. (25%) *benzyl-mercapto*lactopyranoside, m. 115°, n_D²⁰ 1.4876, [α]_D²⁰ = 20.31° (c = 0.13%, EtOH). *Et o*-lactopyranoside, [α]_D²⁰ = 52.01° (c = 0.82%, EtOH), was obtained as a thick yellow sirup by shaking 5.7 g. III with 100 ml. EtOH, 7 g. HgCl₂, and 4.5 g. HgO, filtering, treating the filtrate at 0° for 12 hrs. with 10 ml. anhyd. C₆H₅N, filtering, evapg. the filtrate to dryness, dissolving the residue in EtOH, adding a trace of C₆H₅N, cooling to 0°, filtering, and repeating until no more ppt. formed. IV (11.5 g.), shaken 4 hrs. with 100 ml. EtOH, 6 g. HgO, and 8.5 g. HgCl₂, filtered, the filtrate treated overnight at 0° with 5 ml. anhyd. C₆H₅N, filtered, and the filtrate evapd. to dryness gave *o*-lactose *o*-lactate as an uncrystallizable oil; the *phenylhydrazone*, m. 193°, was obtained by dissolving 2 g. in 10 g. EtOH and 10 ml. H₂O, adding 1 g. PhNHNH₂, allowing the mixt. to stand 12 hrs., filtering, evapg. the filtrate, and crystg. the residue from EtOH; 1.40.

TITLE: The use of gas turbines as marine auxiliaries

PERIODICAL: Sudostroyeniye, ¹⁹no.1, 1963, 24-29.

TEXT: Gas turbines offer advantages as marine auxiliaries in cases where their light weight, simplicity of construction and reliability are of primary importance and their heavy fuel consumption is acceptable. This applies to the drive of emergency and peak generators and to fire pumps. If waste-heat boilers are used in conjunction with auxiliary gas-turbines, the fuel consumption may be less by a factor of 1.5 than that for a diesel generator with auxiliary boiler or a steam turbo-generator with main boiler. This method has been used on the American ship "Pioneer Moor". In hydrofoil vessels weight and space are at a premium but voyages are brief and refuelling is frequent. Under these circumstances, gas turbines could offer considerable advantages as auxiliaries. As compared with the usual diesel engines, and making due allowance for fuel consumption, the output

The use of gas turbines ...

of generators, or of pumps, is three times greater with gas-turbine drive. Loading pumps on tankers are usually steam-driven and particularly on diesel and gas-turbine tankers this requires large auxiliary boilers. Of course some boiler provision must be made for heating the cargo, for washing tanks and meeting general ship requirements during voyages, but the extra power required during loading operations is better provided by an independent drive from either a diesel or gas turbine. In tankers too, an inert gas atmosphere must sometimes be provided in fuel tanks; a gas turbine can serve this purpose and also provide compressed air for main engine starting and so on. Gas turbines for marine auxiliary use should be of the simple open-circuit type without regeneration. A range of sizes will be required between 45 and 1000 h.p., the majority up to 300 h.p. For gas turbines up to 500 h.p. radial turbines and centrifugal compressors give higher efficiencies than axial turbines and compressors. It is unlikely that gas turbines will be advantageous as the main drives of ship's generators except where a waste-heat boiler can be used. However, gas turbines may be very useful as peak load generators, particularly in passenger ships. There are 6 figures and 5 tables.

Hermetic sealing materials for structural elements (Germetiziruyushchiye materialy
 dlya stroitel'nykh konstruktsiy) Moscow, Stroyizdat, 65. 0146 p.
 illus., biblio. (At head of title: Gosudarstvennyy komitet po promyshlennosti
 stroitel'nykh materialov pri Gosstroye SSSR. Vsesoyuznyy nauchno-issledovatel'skiy
 institut novykh stroitel'nykh materialov) Errata slip inserted. 3,000 copies
 printed.

TOPIC TAGS: general construction, construction material, civil engineering,
 hermetic seal, synthetic material. structural plastic

PURPOSE AND COVERAGE: This book gives a survey of the development in the Soviet
 Union and abroad of the problem of hermetically sealed seams of external aggregate
 elements. All types of sealing materials used in construction are viewed.

Engineering of the production of principle hermetic sealing materials used in large
 panel construction is also covered. The book presents means of applying the
 materials and technical characteristics of the apparatus and equipment necessary
 for mechanized application of hermetic of the seams of buildings and structures.
 Special attention is given to methods of testing hermetic seals and means of
 determining their water and air penetrability which permit inspection of materials
 in simulated working conditions. The book also gives data of comparative economic

Uchenyye izvestiya, v. 8, no. 4, Apr. 1963, 498-500.
S/185/63/008/004/015/015

A scientific conference devoted to problems of evaporation, combustion, and gas dynamics of dispersed systems was held at Odessa State University in 1962. I. M. Mechnikov from 1 to 6 October 1962. 1

Sixty-five papers were presented, 24 of which dealt with the theory and practice of production and stability of aerosols and the effect on these processes of various physicochemical factors; the other 21 dealt with working processes in combustion chambers of various power plants. Some of the titles were "Investigating oxidation processes of high hydrocarbon fuels by oxygen from compressed air," S. S. Kramarenko; "Burning of metal suspension in hydrocarbon fuels," D. I. Polishchuk, L. P. Latonina, and V. L. Yankevich; and "Experimental investigation of two-phase flow in axially-symmetrical nozzles," G. A. Komov. Included also were discussions of the methods of solving equations of dissociating gas flow in ducts and gas dynamic calculations for jet engines, G. A. Varshavskiy, E. Ya. Guber, and A. P. Kisel'ov; the formation of plane shock waves in shock tubes and passage of shock waves through a flame front, D. V. Fedoseyev, G. D. Sadamandr, and I. K. Sevast'yanova; experimental results on the flow of combustion products of a methane-oxygen mixture around cambered surfaces with diffraction of detonation waves, L. G. Gvozd'ova; the stability of a steady-state flame front, S. K. Aslanov; the relationship between the flame and the diameter of a burning drop, V. O. Fedoseyev; and theoretical and experimental investigation of burning of spherical metal particles, by L. A. Klyachko.

Abstract : It is shown that in herds with acute forms of newly acqui-
red brucellosis infections accompanied by abortions, the
agglutination reaction (AR), the blood serum reaction
(BSR), and the reaction of Huddleston are instrumental in
leading to the discovery of a large number of animals

Abs Jour : Ref Zhur-Biol., No 18, 1958, 83512

Abstract : cases, BSR, OPR, and OR complexes proved best; and for cases with fading infections, OPR and OR complexes gave best results. Postvaccinal reactions which appeared after the animals were vaccinated with No 68 vaccine, were characterized by the following phenomena: on the 10th day already high titer AR was detected, and BSR on the 20th day. After that both reactions disappeared rapidly. OPR index increased starting with the 5th-6th day, and it remained on a high level for a period of one year (duration of test) if keeping and feeding conditions of the animals were favorable. OR was absent; HAR did not reflect the dynamics of the immunobiological reconstruction of the organism. In 40-50 percent of the cows, AR was positive during abortions, BSR was positive in 35-42 percent, HAR in 64-78 percent, and OPR in 33-100 percent of the cows. OR was positive in 1 cow

AUTHOR: Sadchikov, A.V., Engineer

SOV/94-58-11-7/28

TITLE: A New Method of Fixing Fittings to Insulators for
up to 1,000 V. (Novyy sposob armirovaniya izolyatorov
do 1,000 V.)

PERIODICAL: Promyshlennaya Energetika, 1958,³Nr 11, pp 17-18 (USSR)

ABSTRACT: The new method of fixing fitting fittings to insulators that the author has proposed increases the productivity of labour and ensures reliable operation of the insulators when they are subject to vibration and shock. The method uses rubber washers or sleeves made of old conveyor belts, motor car tyres etc. and the construction is illustrated by a sketch. The outer diameter of the rubber washer is equal to that of the hole in the insulator and the inner diameter is a little larger than that of the fixing bolt used. As the nut is screwed down the rubber washer is compressed and expands laterally holding the fitting firmly in place. In tests
